

IMAG©, enables organizations to implement a comprehensive Identity Management solution in less than a week at a fraction of cost. Aperere's patent pending RapidConnector platforms provide Agent Less, Non-API based connectivity to AD, non-AD, web enabled, client/server, custom/legacy applications, and network devices..

- E• Appliance based turnkey solution
 - No API's- Agent Less
 - Self Service Password Reset
 - Self Service Account request
 - SSO for web/ hosted applications
 - Fail over support
 - Disaster recovery across WAN
 - IdM for Network Devices
- Centralized Identity management
 - Auto discovery of Applications
 - Reconcile users across HR, AD
 - Centralized User access creation
 - Centralized User Deletion
 - Periodic synchronization with HR
 - Centralized IdM for Switches
 - Centralized IdM for hosted Applications like Salesforce etc
- Identity management for AD, LDAP, Novell eDir, with Cluster support for HP-UX, Linux, Solaris, RACF, Oracle backend etc
- RapidConnector Hosted web enabled applications like Sales force, Sharepoint
- Client Server, Legacy application support with RCA appliance – Metavante, Globus etc
- Comprehensive Self Service account request portal with workflow support.
 - Specific start and end dates
 - Email reminders for renewals
 - Remote request capability with SSLVPN integration
- Dynamically configurable workflow for approvals
Periodic reports for compliance SOX, PCI
- Centralized one click compliance reporting – PCI,SOX,HIPAA,GLBA,BS7799 etc

Corporate computing environments are becoming more complex. The presence of innumerable applications in a large computing environment coupled with the presence of knowledge workers, working from within the organization and remotely leading to Compliance, Security and Productivity Issues.

SOX and PCI Requirement

Access to critical enterprise data like corporate financials or personal data like health records or credit card information need to be managed. Access should be limited, authorized, disabled as needed. Approvals need to be documented for reports

Security Challenge

According to leading research reports 40-60% accounts listed in AD or any critical applications are orphan accounts leading to security and compliance issues. Most enterprises lack process or automation to periodically disable orphan accounts as organizations transform.

Productivity Loss

It could take anywhere from 3 to 12 weeks to provision a new user to be fully productive in an enterprise. Most of the required approvals are not secured or documented for compliance.

Aperere's IMAG- Identity Management Solution

Aperere's IMAG provides low-cost easy-to-use Identity Management Solution. In addition to standard connectivity to AD, LDAP, UNIX platforms like HP-UX, IBM-AIX, Linux and Data bases IMAG's patent pending RapidConnector technology provides agent less connectivity to applications like SAP, Globus, Metavante etc. IMAG deployment does not require elaborate software development or consulting services to integrate legacy, custom or client server applications. IMAG can be deployed with failover and disaster recovery configuration to provide uninterrupted service to enterprises.

IMAG – Centralized Identity management

IMAG's provides one time setup with auto discovery mechanisms to automatically identify applications in the network. IMAG centralized users across HR databases, Applications, Domain controllers and network infrastructure for centralized user access management with self service portal for password resets and account requests. Administrators can now centrally create, disable users. Dynamic work flow enables securing approvals to provision a new user or change user access based on roles. Approvals are documented for compliance and forensics.

IMAG – Self Service Portal for Password Reset

IMAG offers a host of self-service solutions like self-service password management, account management, user profile updates through portals, which can be integrated into intranet portal, SSLVPN portal. This helps organizations significantly reduce the IT costs and increase productivity.

IMAG – TrueSSO for hosted and Web applications

IMAG provides Agent less SSO for hosted and web applications. Please refer to IMAG-TrueSSO data sheet for more information. IMAG also provides a mechanism to create anonymous user accounts with passwords and logs the users transparently. This would enhance security especially for remote or outsourced employees.

IMAG- Compliance reports

IMAG's one click, centralized and customizable reporting mechanism helps provide a wide variety of reports helping organizations stay compliant. IMAG's automatic schedule driven, archivable reporting mechanisms helps organizations stay compliant with regulations like PCI, SOX, HIPAA, GLBA, BS7799 etc.

Specifications

2x10/100/1000 Ethernet Ports (Ingress, Egress) 1 x 10/100/1000 Management Port

Dimensions

- 1.7" in (Height), 16.8" (Width), 14.0"(Depth)
- Weight 14.5 lbs (6.6 kg)
- 1 U Rack mountable
