

*IMAG provides virtualization layer for Active Directory to enable segregation of duties for administrators and provide self service portal with workflow for end users*

- Enable Self Service Password Reset for end users
- Enable Self Service account request with approvals
- Protect from external device authentications like SSL VPNs locking AD accounts.
- Enable and limit groups of administrators only to specific roles
- Automated work flow based authorization for any updates to Active Directory
- Enable unlimited simultaneous accesses to Active Directory with audit trail
- Limit outsourced IT administrators to specific roles, with audit trail
- Automatic Email trail on account changes
- Centralize AD reports and views for administrative management
- Quarterly reports on activity for SOX and PCI

Enterprises today continue to deploy and expand Active Directories as centralized authentication source. As new organization units and work groups are created in Active Directory to manage users across the company, there is a need to have multiple system administrators to control and manage these set of users. This system administrator's role should be limited only to a specific set of users or organization or a group in Active Directory. These system administrators could be front desk operators or managers who would like a simple and easy to use Graphical User Interface to manage the user accounts. Outsourced IT services pose yet another problem of limiting remote administrators to specific roles for security and compliance reasons.

## IMAG

IMAG provides an easy to use interface to create groups of system administrators with different roles and privileges thus limiting them to specific tasks. Easy to use web interface masks the complexities of Active Directory management and limits the specific administrators to their role. Comprehensive Self Service portal enables end users to reset their passwords or request for new accesses. IMAG secures necessary approvals before creating or modifying accounts. Notification emails are sent to respective parties on account changes, audit trail is also maintained. IMAG also provides a protective layer between external facing SSLVPNs from causing account locks in AD by hacker logins. Extensive quarterly reports are generated for SOX and PCI recertification.

## IMAG for Multiple ADs

IMAG can be configured to virtualize multiple Active Directories across LANs and WANs. Administrators can now generate comprehensive user profile reports across multiple ADs periodically without waiting for actual consolidation to be done.

## Guest group management by IMAG

IMAG can be setup to manage multiple guest groups in one or many Active Directories. IMAG provides complete guest user access life cycle management including password reset and user authentication.

## Specifications

2x10/100/1000 Ethernet Ports (Ingress, Egress) 1 x 10/100/1000 Management Port

## Dimensions

- 1.7" in (Height), 16.8" (Width), 14.0"(Depth)
- Weight 14.5 lbs (6.6 kg)
- 1 U Rack mountable

## Standard Warranty Coverage

- 1 year Hardware & Software
