

IMAG provides agent-less, comprehensive self service password reset for all enterprise applications. SOX and PCI compliance mandate periodic password resets for users and administrators with access to critical data. IMAG can be easily integrated with SSL PVN, NAC and Intranet portals.

- Self Service password reset portal
- Supports Active Directory (GINA) for desktop password resets
- Self Service Reset for Domino, RACF, LDAP, AD, eDir, HP-UX and Solaris platforms
- Self Service reset for web, custom, legacy and client-server applications
- Self service password reset of remotely hosted applications like Google Apps, Sales Force, ADP etc
- Password Reset policies to enable SOX and PCI compliance for unsupported applications
- Management of group accounts with common passwords like admin accounts for PCI compliance
- Password synchronization across multiple applications
- Complex password policies based on length, time etc
- Automatic email reminders on password expiry. Self service portal to reset passwords eliminate help desk calls
- Extensive reporting for audit trail and compliance needs
- Quarterly reports on activity for SOX and PCI

Enterprises today have several applications across multiple domain controllers requiring users to remember multiple user login accounts and passwords. Users leave their passwords written on their desks causing security issues. Today, 40% of help desk calls are to reset passwords or reset locked accounts. Organizations with 1000 or more employees incur close to \$250K-1M on help desk costs or lost productivity.

SOX, HIPAA and PCI compliance mandate periodic password resets to applications with critical enterprise data like financials, patient health records, and credit card information. In addition, PCI specifically requires the administrators of infrastructure devices like switches, routers, servers and applications to not only reset passwords periodically but also to maintain an audit trail.

IMAG

IMAG provides a comprehensive self service password reset portal that can be integrated with an intranet portal, SSL VPN portal or NAC device. IMAG's RapidConnector platform enables password reset capability across a variety of domain controllers and applications like Active Directory, LDAP, eDir, MAC HP-UX, Solaris and mainframe domain controllers, applications like domino and RACF. RapidConnector easily integrates web, hosted, client server and legacy applications with no need for APIs.

Password Policies for SOX and PCI

IMAG can be configured to implement complex password policies on length, dictionary attacks and reset times. Reminder emails will be sent to users to reset passwords; notification emails will also be sent with any changes to accounts. Audit records are maintained for compliance reports and audit trails.

Administrator management for PCI

IMAG also provides a comprehensive group management feature to associate and manage passwords for shared accounts like administrator accounts of infrastructure devices like switches, routers and servers. PCI requires that the administrator access be managed when the infrastructure is in the PCI data path. Automatic password resets are triggered with passwords reset and sent to new groups.

Specifications

2x10/100/1000 Ethernet Ports (Ingress, Egress) 1 x 10/100/1000 Management Port

Dimensions

- 1.7" in (Height), 16.8" (Width), 14.0"(Depth)
- Weight 14.5 lbs (6.6 kg)
- 1 U Rack mountable

Standard Warranty Coverage

- 1 year Hardware & Software
